

## **Municipal Hospital in Litoměřice Survey of Available Health Services and Capabilities for International Cooperation**

**Ivo Burger**

CIO, Municipal Hospital in Litoměřice, the Czech Republic

The Municipal Hospital in Litoměřice offers complex services in broad spectrum of medical specializations in a relatively new and comprehensively equipped hospital. Our staff (doctors, nurses, officers, technicians, etc) is very well educated and experienced. The hospital has approximately 630 beds which are divided to individual departments, for example surgery, traumatology, urology, neurology, rehabilitation, otorhinolaryngology, anesthesiology, department of internal medicine, cardiology, orthopaedics, paediatrics, gastroenterology, gynaecology, etc. Our hospital has several ambulances and other specialized departments dealing with biology, haematology, microbiology and radiodiagnostics with CT, angio, ultrasound machines, etc. All of these departments are equipped with modern and new technologies. One of the most important parts is the complex hospital information system. Its implementation was started in 1993 and expanded in 1996 covering all departments in the hospital. Basis and targets of implementation of the hospital information system in our hospital are particularly the support of health care, the possibility of monitoring of health care, the monitoring of expenses and productivity, analyses and solutions, scheduling of solutions, support of research and education and all another administrations.
